No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           600
                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                           100
                This invention relates to polynucleotide sequence PSEC137, which encodes a human proliferation differentiation factor protein. Included in the invention is a vector containing the cDNA sequence, a transformant containing the vector, and a process for producing the protein. The protein together with its encoded DNA and antisense DNA are used in drugs to maintain the haematopoietic function. The present sequence represents the human proliferation differentiation factor protein amino acid

This invention relates to nucleic acid sequences AAF93744 - AAF93916

which encode human secretory or membrane proteins represented by AAB88317

- AAB88419. Included in the invention are primers AAF93917 - AAF894295 and

- AAB86419. Included in the invention are primers AAF93917 - AAF894295 and

AAF86232 - AAF62235 which are used to isolate the CDNA sequences of the

continuon. The invention also includes methods for the production of

antibodies directed against the proteins, and CDNA sequences. Which can

continuon. The polymucleotide sequences can be used in gene

therapy. The polymucleotide sequences and the proteins they encode may be

the prevention, treatment and diagnosis of diseases associated

with inappropriate secretory protein/membrane protein expression. The

cucleic acids and complementary sequences may also be used as DNA probes

in diagnostic assays (e.g. polymerase chain reactions (FCR)) to detect

and quantitate the presence of similar nucleic acid sequences in samples.

Conteins/membrane polypeptides and their role in metabolism. The

proteins/membrane polypeptides and their role in metabolism. The

control of expression and activity. The antibodies and antagonists

contained antibodies may also be used as therapeutic agents to down regulate expression and

contained the presence of the polypeptides in samples

contained the presence of the polypeptides in samples

contained immunosorbant assay (ELISA). Examples of diseases which may be

contained include rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CTGGAGGCGGCGCTAGGGCTCCCCGTGAAGAAGCCGCGGGCTCCGCGGGACCACGGCCTGGG 120

Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                      The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      321

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠ
                                                                                                                                                                                  The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and singlaplaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                       1 genome-derived single exon nucleic acid probes useful for analyzing expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GTCTCAGCCTCCCCAGATCCTAGGCCTCTGAAGGAAGGAGGAGGAACCACTGCTCCCC 201

Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    321
                                                                                                                                                                                                                                                                        The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GTCTCAGCCTCCCCAGATCCTAGGCCTCTGAAGGAAGAGGAGGAGGCACCACTGCTCCCC 201

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21355-ABA41365). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                   Protein #175 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Single exon nucleic acid probes for analyzing gene expression in human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from thuman breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from wRNA of human breast, and then measuring the label bound to each probes of the microarray. The probes are useful for verifying the propession of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GCCATGACCCCAGGCAACACCCCTCCCAGGACCCCAGAGGTTACTCCGTTGCGGCTG 321

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                              261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human brain expressed single exon probe encoded protein SEQ ID NO: 25612.

The invention relates to a single exon nucleic acid probe (SENP) (1) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (1) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosts, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at fire wipo.int/pub/published_pct_sequence

The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast diseases and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to a spatially-addressable set of single exon mucleic acid probes for measuring gene expression in a sample derived from the card probes for measuring gene expression in a sample derived from the comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their probes. Also included are a microarray comprising the novel set of probes which phybridises at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a sample cit derived from human lung massuring the label detectably bound to each probe of the array, identifying exons in a ewkaryote genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the ewaryote and (b) measuring the label detectably bound to each probe of the array identically predicting at least one exon from genomic sequences of the advance; and (b) detecting specific hybridiastion of algorithmically predicting to the predicted exon, the probe is included a labeled nucleic acids from ewkaryote lung mRNA, to a single exon probe having a fragment identical to the predicted exon, the probe is included the above mentioned microarray; assigning exons to a single exon probe having a fragment identifying exons from genomic sequence by the method expression of the exons in the tissues and/or cell types undicates that the exons about do a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types undicates that the exons about do a single gene, a peptide comprising on the exons in the tissues and/or cell types used for identifying exons in a gene particularly using human lung derived mRNA and for the exons in a gene patted for derivity of malysis, and for identifying exons in a periode for gene expression of the exons solerosis, landmonary disease (IDD), interstitial lung cancer, chronic obstructive
                    Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary histiocytosis; Iymphangioleiomyomtosis; Karagener syndrome; pulmonary hveolar proteinosis; fibrocystic pulmonary dysplasia; purary ciliary dyskinesis; pulmonary hypertension; hyaline membrane disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples.
tuberous sclerosis; Gaucher's disease; Niemann-Pick disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 27; SEQ ID NO 25185; 634pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chen W, Rank DR

```
regulatory sequence that modulates expression of (I) in the host cell; (4) a polypeptide (II) encoded by (I); (5) a composition comprising the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4); (7) detecting (I) or the polypeptide of (4) in a sample; (8) identifying a compound that binds to the polypeptide of (4); (9) producing the polypeptide of (4); and (10) a collection of polynucleotides comprising at least one of the polynucleotide sequences (I). The polynucleotides (I) can be used as hybridisation probes, oligomers or primers, for chromosome or gene mapping, for the recombinant production of proteins, and for generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 CTGGAGGCGCGCTAAGGCTCCCCGTGAAGAAGCCGCGGCTCCGCGGACCACGGCCTGGG 120

                                                                                                                    The invention relates to avilamycin derivatives (1) with antibacterial, vibucide, protozoacide and fundicide activity. (1) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aucusus. (1) are more hydrophilic than known avilamycins. The present sequence is that of an avilamycin synthesis enzyme from the Streptomyces viridochromogenes Avilamycin pynthetic gene cluster (ABZ37515-

from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                213 GCAGGCAGACCACACCACACATGCTGGACTGTCACTGAGCCAGCAGCATGACC-- 270

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence Seq
